

FIXED FOCUS BINOCULARS

The fixed focus binoculars are recommended for people with normal vision (or corrected to normal vision with eyeglasses or contact lenses):

I INSTRUCTIONS FOR USE :

A IPD (INTERPUPILLARY DISTANCE) ADJUSTMENT

Adjust the eyepieces to fit the distance between your eyes by grasping the lens barrels with both hands and bending at the hinges until you see a single circle of view.

B FOCUS SYSTEM

Your new fixed focus binocular, unlike standard binoculars, has no focusing mechanism. Your binocular is permanently in focus at all distances from a minimum focus point to infinity. Just lift the binocular to your eyes and enjoy the view.

C RUBBER FOLD-DOWN EYECUPS

To use the binocular with your glasses on, fold the pliable eyecups down to make the full field of view available.

I CARING FOR YOUR BINOCULAR :

A Store your binocular in its case in a dry place.

B If you need to clean the lenses, use the lens cloth that comes with the binocular, or a soft, lintless cloth.

C One or two drops of alcohol may be used to remove smudges.

III IMPORTANT :

Do not clean your binocular internally or take it apart.

CAUTION! : Viewing the sun can cause permanent eye damage. Do not view the sun with this binocular or with the naked eye.
